Victoria Water Supply. Mr. Attorney General McCreight, in addressing the Fire Department on Thursday, let in a little daylight on the subject of the survey which has been going on for some months past with a view to supplying this city with a requis ite quantity of pure and who some water. So long and so silently have the surveyors been prosecuting their labors that people thegan periously to question in their own minds whether there were not some insuperable barrier in the way, over which the serveyors could not pass, and that therefore they were unable to complete the task which the Government had devolved upon them. Fortunately, however, they had a fund of seven thousand dollars to draw upon, and so long as that held out hope lingered in the public breast that every d ficulty would be overcome and that at least by the time Parliament was called together for the dispatch of business the survey wou d be completed, a report be prepared, aid the requisite data be placed in the hance of the Commissioner of Lands and Works to be laid before the Legislature, so that they might be in a position to legislate intelligently upon the subject. All doub a have now been dispelled, thanks to the Attorney General's revelation, and the ei izens of Victoria are now in possession of the gratifying fact that from Elk Lake a supply of pare water sufficient for a city four or five times the present population of Victoria can be drawn, at an ex pense not exceeding \$100,000. To be assured by sc high an authority as the Provincial Engineer that Victoria can be abundantly supplied with water, for any and all purposes, at a cost of \$100,000, will of course be very grat fying to our citizens generally, not because they had any doubte about the matter, but for the reason that it simply contrms what was before ascertained, and is corroborative of calculations and surveys nia le by other competent persons which the Government knew to be in existence, and which they might have possessed themselves of at an expense of probably no: one six's what this last survey will cost the country. Now that the feasibility of the project is established beyond all reasonable doubt, the next question to be decided is, what is the best method of accomplishing the object so argently desired? There are two ways thy which it can be done. First, by the Municipal Council, under a By-Law authorizing that body to berrow money for the purpose on the credit of the city and to make provision for the redemption of its bonds within a stip - lated period of time, say twenty-fiv years, the money for that purpose to be raised by the sale of water, together with a rate upon city property sufficent to make good any deficiency that may account on water account. Secondly, by a private company, to whom shall be granted the exclusive right to supply the civiz-us with water for estimulated number of years, and upon such conditions us to rates as may be mutauly agreed upon between the parties to the contract. To our mind the latter would be the better method of procedure. It is a well ascertained fact that all such works are more efficiently and economically conducted by private companies than by municipal bodies, and for very obvious reasons. Gentlemen who have their own merns invested in undertakings of that character, and who desire to realize a profit from the investment, take good care that none but com-petent persons shall have the management of their affairs and that their business shall be conducted with a due regard to economy. They have no axes to grind for other people, nor places to provide for needy and importunate constitu ents It is not eq, however, with Municipal Corporations. There are always a number of hangers on about the Municipal Chambers who have a claim upon members of the Council for services rendered; and that they are sometimes unnecessarily provided for, it were useless to deny. And all this goes to diminish the profits on any investment that may be made of Municipal funds. Besides, Municipal bodies are constantly nudergoing change in the personnel of their composition, and there is no guarantee that a Municipal Council this year composed of houest, intelligent, and capable men, may not be supplanted next year by men possessing neither character, integrity, nor business capacity. Municipal ratepayers do not always study their own interests in the choice they make of persons to represent them as the Council Board, and for that reason among others that might be mentioned, it s deemed best, particularly in small communities in undertakings involving a large expenditure of money, such as suping them with gas and water, to confide them to private companies, to whom such concessions are made as will ensure them a resonable profit on the amount of capital invested. We have no doubt that should the Government pass a Bill at the next session of the Legislature containing such provisions as will make it an object for capitalists to invest their money in Victoria water stock, the money necessary to supply this city with all the water required will be forthcoming, and before the expiration of another year the citizens be in possession of that which they have so long been in need—a copious supply of good and wholesome water.
